

TIMC Old vs New Website

SEO Comparison Report

Prepared for Talha Integrated Modern Company (TIMC)

Old site source: archived PHP website (trsco.zip)

New site: <https://www.trsko.net> (Next.js on Vercel)

Report date: 20 August 2026

Prepared by: WeRQA

Bottom line. The new TIMC website is a full technical and brand upgrade over the old PHP site. Search readiness moved from a thin, outdated brochure stack (empty descriptions, no sitemap/robots, no Open Graph/schema, TRS naming) to a modern crawlable property with unique metadata, structured data, clean URLs, legacy redirects, mobile performance work, and a live Search Console sitemap (38 pages discovered).

1. Scope of comparison

This report compares the **discarded old website** (flat PHP/HTML files from the TIMC archive) with the **live new website** at <https://www.trsko.net>. It focuses on SEO-relevant differences: architecture, brand naming, metadata, indexation, structured data, mobile/performance, URL equity, and content structure — not unpaid advertising results.

2. Snapshot: old website vs new website

Old website

- Classic PHP includes (`header.php`, `footer.php`)
- URLs like `/about-us.php`, `/our-services.php`
- Public brand mix: **Talha Rental Services (TRS)** + “Talha Constructions...” titles
- ~11–19 public PHP/HTML pages
- jQuery 1.7-era scripts; IE9 fallbacks
- GTM container present
- No robots.txt / sitemap in archive

New website

- Next.js App Router hosted on Vercel
- Clean URLs: `/about`, `/services/equipment-rental`
- Public brand: **TIMC / Talha Integrated Modern Company**
- Sitemap with 38 discoverable URLs (confirmed in Search Console)
- Modern responsive UI + WebP/media optimisation
- GA4 + Search Console verification
- robots.txt + sitemap.xml live

3. Side-by-side SEO difference table

AREA	OLD WEBSITE	NEW WEBSITE	VERDICT
Platform	OLD Static/legacy PHP pages with includes	NEW Next.js App Router + Vercel CDN	Upgrade
Public brand	TRS / Talha Rental Services / “Talha Constructions, Power Generators & Heavy Equipments”	Consistent TIMC naming in titles, schema, and UI	Upgrade
URL structure	.php filenames; mixed duplicates possible	Clean routes; service/project detail pages	Upgrade
Meta descriptions	EMPTY on homepage and most pages	UNIQUE descriptions per key route + local keywords	Upgrade
Titles	Long shared brand string + page label; some mismatches (e.g. privacy titled Terms)	Shorter TIMC template; unique page titles	Upgrade
Open Graph / Twitter	None found	Sitewide OG + Twitter + dedicated share image	Upgrade
Canonicals	None found	Canonical URLs on pages via metadataBase	Upgrade
robots.txt	Not present in archive	Live at /robots.txt (allows site, points to sitemap)	Upgrade
Sitemap	Not present in archive	Live /sitemap.xml — GSC status Success, 38 pages	Upgrade
Structured data	None found	Organization/LocalBusiness, Service, Breadcrumb, CreativeWork	Upgrade
H1 strategy	Header H1 = “Talha Rental Services” on pages (brand-only, repeated)	Home H1 = TIMC + “General Contractor in Saudi Arabia”; internal heroes use page H1s	Upgrade
Mobile readiness	No viewport meta in sampled head markup; older CSS grid approach	Responsive layout designed for phone + desktop	Upgrade
Performance assets	Unoptimised classic image set; no modern format pipeline	WebP/AVIF pipeline; compressed hero/about videos; profile PDF ~5.4 MB	Upgrade
Image accessibility	Limited/empty alt practices common in era	Descriptive alts on heroes, project cards, key sections	Upgrade
Analytics	Google Tag Manager (GTM-N3WZ7VWS)	GA4 in the new app + Search Console property	Upgrade
Old URL equity	N/A (those were the live URLs)	~66 exact legacy redirects (301) from old PHP paths to new routes	Upgrade
Content depth	Home, About, Services list, 4 service PHP pages, Clients, Contact, legal	Services with detail routes, ongoing/completed projects, portfolio, clients, contact, legal	Upgrade

4. URL mapping: old pages → new pages

Google and users may still hold old bookmarks or indexed .php links. The new site preserves that equity with redirects, for example:

OLD URL	NEW URL
/index.php	/
/about-us.php	/about
/our-services.php	/services
/rental-equipment-division.php	/services/equipment-rental
/construction-services.php	/services/civil-infrastructure
/power-generation.php /maintenance-services.php	/services/energy-infrastructure
/our-valuable-clients.php	/clients
/contact-us.php	/contact
/privacy-policy.php	/privacy
/terms-conditions.php	/terms

5. What improved for search engines

1. **Discoverability** — sitemap + robots give Google a clear crawl map (38 pages already discovered).
2. **Relevance** — unique titles/descriptions + Jeddah/Saudi Arabia phrasing replace empty descriptions and TRS-era wording.
3. **Understanding** — JSON-LD tells Google TIMC is a Jeddah LocalBusiness/contractor with services and breadcrumbs.
4. **Sharing** — Open Graph previews work when links are shared on WhatsApp/LinkedIn/etc.
5. **Continuity** — 301 redirects reduce “soft 404” loss from old indexed PHP URLs.
6. **Experience signals** — mobile layout + lighter media support better engagement and Core Web Vitals potential.

6. What the old site still “had” vs what matters now

OLD-SITE ITEM	NEW-SITE EQUIVALENT / NOTE
Domain trsco.net	Kept — primary canonical is https://www.trsco.net
GTM tag	Replaced/supplemented by GA4 in the new app; use GA4 as source of truth
Keyword meta tags	Still present on new site where useful, but descriptions + content matter more
Basic service pages	Expanded into clearer TIMC divisions with dedicated routes and schema
Old GSC HTML file in archive	New verification file deployed for the current property

7. Business impact (plain language)

- The old site looked dated and was hard for Google to understand cleanly.
- The new site presents TIMC as a modern Jeddah contractor with clear services and projects.
- Search Console is already receiving the new sitemap successfully.
- Rankings still take time; this comparison shows *capability and readiness*, not an overnight #1 guarantee.

8. Recommended follow-through

1. Keep using the **www** Search Console property (already verified).
2. Leave the sitemap submitted; do not resubmit repeatedly.
3. Optionally Request indexing for Home, Services, Contact.
4. Monitor Performance + Pages indexing for 30 days.
5. Prefer sharing www.trsco.net links going forward.

Confidential — prepared for TIMC client review.

Evidence basis: archived old PHP site (trsco.zip) + live inspection of https://www.trsco.net + Search Console sitemap success (38 pages).
